As a Doctor of Oriental Medicine and a licensed Acupuncture Physician, I can order many kinds of lab and progressive tests. There are several options depending on what is the best for you. Some test will require an in house draw, or a visit to Lab Corp (there are 3 main locations), or a kit you take home and send off with the prepaid enclosed Fed Ex mailer. I can suggest the ones I feel would most benefit you. This provides a more focused approach to your nutritional health and a clear picture of what is really going on. Also, I will help you understand the results and give you strategies for dealing with issues that may be revealed.

If you have had any tests done with your MD, they are part of your medical history and you have a RIGHT to a copy for your records. I can request your records to retrieve the test results; it is easier if completed within the last 2 years.

If you have insurance-they may or may not reimburse you for the tests if I order them.

Test	Description	Price
EAV Testing	This is a non-invasive assessment of your entire body that measures the electrical status of a meridian point that is associated with organs, glands and many metabolic functions. Called Electro Acupuncture (according to Voll, the doctor who coined it) has been around for 60 years. Detects subclinical things that may be subtle disturbances. 15 points in each hand and foot are taken with a small device and put into a program that then reveals what functions of the body are the most stressed.	\$90
Blood Tests		
Opti Chem	This test covers all basic metabolic functions- Including - Glucose, Serum; Uric Acid, Serum; BUN; Creatinine, Serum; Sodium, Serum; Potassium, Serum; Chloride, Serum; Carbon Dioxide, Total; Calcium, Serum; Phosphorus, Serum; Magnesium, Serum; Protein, Total, Serum; Albumin, Serum; Globulin, Total; A/G Ratio; Bilirubin, Total; Alkaline Phosphatase, Serum; LDH; AST (SGOT); ALT (SGPT); GGT; Iron, Serum; Cholesterol, Total; Triglycerides; HDL Cholesterol; VLDL Cholesterol Calculation; LDL Cholesterol Calculation; Total Cholesterol/HDL Ratio; LDL/HDL Ratio; TSH; Thyroxine (T4), Total; T3 Uptake; Free Thyroxine Index; CBC with Differential and Platelet Count.	\$99
Opti Plus	Includes - All the components of the Opti-Chem™ Panel plus Hb A1c; TIBC & % Iron Saturation; Ferritin; C-Reactive Protein (High Sensitivity). This is good to see how much inflammation is present.	\$139
Opti-Plus D	All the components of the Opti-Chem & Plus Panel plus 25-Hydroxy Vitamin D.	\$163
